

Create a transparent panel with menu

Select a picture as your background. Place it in a folder called img.

HTML

```
<!DOCTYPE html>
<html>
  <head>
    <meta charset="utf-8">
    <title>Genomskinlig meny</title>

    <link rel="stylesheet" type="text/css" href="style.css">
  </head>
  <body>
    <div id="menuField">
      <div id="menu">
        <ul style="list-style-type:none" id="inner">
          <li> <a href="http://www.w3schools.com/html/">w3schools</a> </li>
          <li> <a href="http://www.csszengarden.com/">CSS Zen Garden</a> </li>
          <li> <a href="https://css-tricks.com/">CSS-tricks</a> </li>
        </ul>
      </div>
    </div>
  </html>
```

CSS

Sätter stilen på hela dokumentet genom att ange stilen för HTML-taggen. (som ni gjorde med p-taggen)

```
html {
  background: url(img/light.jpg) no-repeat center center fixed; /* picture is here*/
  -webkit-background-size: cover;
  -moz-background-size: cover;
  -o-background-size: cover;
  background-size: cover;
  padding: 0px;
}

#menuField /* id for black panel*/
{
  color: #FFFFFF;
  width: 100%;
  height: 100px;
  background-color: #000000;
  position: relative;
  top: 450px;
  opacity: 0.75; /* How transparent the panel will be. 1 is not at all*/
}

#menu{ /* id for black element*/
  font-size: 22px;
  padding-top: 35px;
}
```

```

/* unvisited link */
li a:link {
    color: white;
}

/* visited link */
li a:visited {
    color: white;
}

/* mouse over link */
li a:hover {
    color: gray;
}

/* selected link */
li a:active {
    color: gray;
}

li {
    float: left;
}

/* Every link inside <li> but not outside of it*/
li a {
    padding: 28px;
    text-decoration: none;
    font-weight: bolder;
}

/* För att centrera menyn*/
#inner {
    width: 50%;
    margin: 0 auto;
}

```
